Statement of Significance

Last updated on -

Contribution to landscape

The River Red Gum (*Eucalyptus camaldulensis*) is one of 9 trees extending both north and south of Alphington Station. This main tree, on the southern side is clearly much older than the others. The population is a remnant of the woodland that occurred on the eastern Keilor basalt plains

In 1992 to 1995 a community led regeneration program replaced sown grass undercover with native vegetation. This allowed for significant tree regeneration to take place and naturally sown *E camaldulensis* saplings are now present.

Measurement: 10/02/2014

Height (m): 28

Girth (m): 3.79

Spread (m): N-S 17; E-W 23

Estimated Age (yrs): 200+

Condition: Good

Access: Unrestricted

Classified: 05/03/2014
