Statement of Significance

Last updated on - March 3, 2000

What is significant?

The Underground Car Park is located in the heart of the University of Melbourne's Parkville campus. The car park had been provided for in the Campus Master Plan which was prepared by Bryce Mortlock in 1970. The scheme provided a solution to the problem of too many cars on the campus whilst simultaneously providing a landscaped area above. It was designed by the architectural firm Loder and Bayly in association with Harris, Lange and Partners. The engineer in charge of the project was JL van der Molen. Excavations commenced in May 1971 and the car park was completed by November 1972. Landscaping of the South Lawn area above the car park and areas adjacent to the Baillieu Library and John Medley Building were carried out by the firm of Stones and Rayment. The Underground Car Park is constructed of reinforced concrete shells with parabolic profiles supported on short columns. The columns contain drainage pipes which allowed for the planting of the lawn and trees of the South Lawn. The east entrance contains a door from a 1745 house in St Stephen's Green, Dublin whilst the west entrance is framed by two Atlas figures from the demolished Colonial Bank, Elizabeth Street.

How is it significant?

The Underground Car Park is of architectural significance to the State of Victoria.

Why is it significant?

The Underground Car Park is architecturally significant as an extraordinary example of a building type. At the time of its construction no other car park in Australia was fully enclosed and concealed underneath landscape. The vaulted form of the car park interior creates a dramatic and evocative space. The design demonstrates an innovative and imaginative solution to the mundane and utilitarian problem of car parking. Additionally it is significant as an unusual form of reinforced concrete, but demonstrates the versatility of the material and the architectural expression that it can achieve. The car park's appearance on ABC television as setting for a ballet sequence and its use in the internationally successful film Mad Max is indicative of the car park's wide aesthetic impact on public consciousness. The arched entrance flanked by the Atlas figures and the addition of a 1745 door from Saint Stephens Green, Dublin represents a notable application of decorative schemes and material in construction and design.

Permit Exemptions

General Exemptions:

General exemptions apply to all places and objects included in the Victorian Heritage Register (VHR). General exemptions have been designed to allow everyday activities, maintenance and changes to your property, which don't harm its cultural heritage significance, to proceed without the need to obtain approvals under the Heritage Act 2017.

Places of worship: In some circumstances, you can alter a place of worship to accommodate religious practices without a permit, but you must **notify** the Executive Director of Heritage Victoria before you start the works or activities at least 20 business days before the works or activities are to commence.

Subdivision/consolidation: Permit exemptions exist for some subdivisions and consolidations. If the subdivision or consolidation is in accordance with a planning permit granted under Part 4 of the *Planning and Environment Act 1987* and the application for the planning permit was referred to the Executive Director of Heritage Victoria as a determining referral authority, a permit is not required.

Specific exemptions may also apply to your registered place or object. If applicable, these are listed below. Specific exemptions are tailored to the conservation and management needs of an individual registered place or object and set out works and activities that are exempt from the requirements of a permit. Specific exemptions prevail if they conflict with general exemptions.
