Statement of Significance

Last updated on -

Stokell, constructed in 1889 by the builder Stephen Armstrong, is of regional significance as a house either designed by or copied from the architect John Beswicke, as evidenced by the combination of semicircular and stilted segmental arches, especially characteristic of his work. The building derives some significance for its association with a prominent local building contractor (who constructed Stonnington, Cliveden Mansions, Ball and Welsh and woodmasons iceworks in Malvern and Oakleigh).

Physical Description 1

Stokell is a large stuccoed Italianate mansion with a prominent arcaded verandah on two sides between projecting bay windows and a hipped slate roof with imposing windows. Details include bracketed eaves, architraves and impost mouldings, Corinthian capitals and balcony balustrades. The building is generally intact although its land holding has been dramatically reduced and it has lost the frontage to Malvern Road. The external painting of cement render and sundry minor modifications for institutional purposes have reduced the impact of this otherwise imposing mansion.

The original external wash house survives. The association with a notable builder, Stephen Armstrong, whose company built two of Melbourne's most notable mansions, Stonnington and Cliveden is reflected by the elaborate nature of this house.

Builders' houses of the nineteenth century often were enriched by the nature of the projects which they had undertaken. The building is able to demonstrate the wealth of leading building contractors of the 1880s. Externally its grand scale remains although its impact is much reduced by the subdivision of the land around, especially the front garden.
