Statement of Significance

Last updated on - June 4, 2004

Rare or localised:

Discovered in 1975 by local field naturalist James Turner and identified by David Cameron, La Trobe University. This is the only known occurrence in Victoria, with the next closest in Bega district, NSW. *Symplocos thwaitesii* is normally a rainforest tree seen in tropical, sub-tropical and warm temperate rainforests, often in gullies. The tree is located on the western side of the Snowy River at Wood Point, 14km north-west of Orbost.
