Statement of Significance

Last updated on - June 16, 2008

Rare and localised

This species is rare in Victoria with its only known in a single location in the upper reaches of Harrison Creek. The trees surveyed ranged in size from a single stem to large multi-branched 'umbrella' shaped trees. The trees were flowering when inspected. *Polyscias murrayi*, is a common rainforest tree of eastern Australia and occurs as a secondary regeneration species in disturbed rainforest areas, often on hillsides.

The next known location is at Bellbird Creek, north of Eden, NSW.

The trees are located near Black Hole Road, 40+ minutes along Harrison's Creek to the south, Howe Ranges, Croanjingalong National Park.

Measurements: 29/03/1998 (largest tree observed)

Spread (m): 15

Girth (m): 1.58

Height (m): 21

Estimated Age (yrs): 100

Condition: Good

Access: Unrestricted

Classified: 17/12/1998

Other Names Pencil Cedar (Or Umbrella Tree),

Hermes Number 70534

Property Number
