Heritage Listing

National Trust

Statement of Significance

Last updated on - June 8, 2004

Aesthetic value

Curious growth form

This *Angophora costata* is a fine, medium-sized example of this common woodland and forest tree of Eastern Australia. This tree has a particularly attractive growth form. with unusual features including its heavily striated trunk and branches. The lower branches display a spectacular weeping habit, many of which touch the ground. The tree was planted by Walter Zumstein, probably in the late 1920s or early 1930s, on a crown lease he held in the area.

Located at Zumsteins, Grampians National Park, across suspension bridge north of river and north-west of toilet block

Measurements: 14/04/1988
Spread (m): 11
