## Statement of Significance

Last updated on - June 10, 2004

Contribution to landscape of historic garden  
Rare or localised

This *Picconia* is located on the south side of the homestead, in a garden that is thought to date from the time the house was built in 1885. This multi-trunked specimen makes an attractive contribution to the unembellished lawn. *Picconia excelsa* is endemic to Macronesia , occurring on the Canary Islands(Spain) and Madiera(Portugal) and is uncommon in cultivation in Victoria. This specimen appears to host a bracket fungus.

Measurements: 25/11/1994

Spread (m): 15.8

Girth (m): 4.14  
Height (m): 15  
Estimated Age (yrs): 90  
Condition: Good
