Statement of Significance

Last updated on -

The archaeological remains of the former building site are highly significant as they display how Melbourne's cable tram system operated.

The tracks and engine houses of the Melbourne cable tram network were constructed by the Melbourne Tramways Trust (MTT) during 1885-91. It was considered to be the world's largest cable tramway network under single ownership. The cable tram car sheds were built by the Melbourne Tramway & Omnibus Company which leased the lines from the MTT between 1885 and 1916 and operated the tram services.

Archaeological
Significance

The former cable tram sheds have potential to contain evidence of significant 19th century archaeological remains such as parallel tram tracks, and an associated traverser to move the vehicles between the tracks, a turntable, and inspection and access pits for maintenance and repair of the trams.

The archaeological remains of the former building site are highly significant as they display how Melbourne's cable tram system operated.
