Statement of Significance

Last updated on -

C Listed - Local Significance STATEMENT OF SIGNIFICANCE

The house at 167 McKillop Street, Geelong, has significance as a reasonably intact example of the Edwardian style. Built between 1905 and 1908 by Thomas Sleven, the building appears to be in good condition when viewed from the street.

The house at 167 McKillop Street is architecturally significant at a LOCAL level. It demonstrates original design qualities of an Edwardian style. These qualities include the complex roof forms that include the recessed broad

hipped roof, gable that projects towards the street frontage, rear gable that projects at the side, front hipped verandah and the return verandah, together with the recessed squat tower that has a hipped (pyramdial) roof. Other intact or appropriate qualities include the galvanised corrugated steel roof cladding, horizontal weatherboard wall cladding, two unpainted brick chimneys with projecting rendered tops and terra cotta pots, modest eaves with exposed timber rafters, encircling timber fretwork and curved timber verandah valances, worked timber verandah posts, projecting bay at the front with timber framed casement windows and leadlighted highlights, timber framed double hung (including the other front windows with three panelled timber bases), timber framed doorway at the side, modest tower eaves with decorative timber brackets, decorative tower upper wall panels and strapping, timberwork simulating shingling under the eaves, and the gable infill (curving timber fretwork and timberwork simulating shingling).

The house at 167 McKillop Street is historically significant at a LOCAL level. It is associated with residential developments in Geelong during the Edwardian (c.1890-1915) period. In particular, this house has associations with Thomas Sleven, original owner who built it between 1905 and 1908.

Overall, the house at 167 McKillop Street is of LOCAL significance.

Physical Description 1

The house at 167 McKillop Street, Geelong, is set on a wide allotment for the local area. The house has a front setback of approximately 6 metres, with wide side setbacks. The front garden consists of perimeter flower beds and grassed areas, with a concrete path at the side. The front is bound by an introduced rendered masonry fence with open steel balustrades and is approximately 1000 mm high.

The asymmetrical, single storey, horizontal weatherboard, Edwardian styled house is characterised by complex roof forms that include a recessed broad hipped roof, a gable that projects towards the street frontage, a rear

gable that projects at the side, front hipped verandah and a return verandah, together with a recessed squat tower that has a hipped (pyramdial) roof. These roof forms are clad in galvanised corrugated steel. Two early unpainted brick chimneys with projecting rendered tops and terra cotta pots adorn the roofline. Modest overhangs with exposed timber rafters are features of the eaves.

A feature of the design is the verandah that encircles the front and western side of the house. It is supported by worked timber posts and is decorated by simple timber fretwork and curved timber valances. The fretwork valance under the front projecting gable is raised and larger than the other fretwork. The verandah also has an introduced concrete floor with introduced brick base walls and steel balustrades. There is also introduced cladding infill and entrance way at the side.

Under the front verandah gable is an early projecting bay with timber framed casement windows and leadlighted highlights. The other windows are timber framed and double hung, with the front windows having three panelled timber bases. The timber framed doorway at the side (with introduced steel security door) also appears to be early.

Another feature of the design is the tower. It has modest eaves with decorative timber brackets, below which are decorative panels and strapping.

Other early decorative features of the design include the timberwork simulating shingling under the eaves, and the gable infill (curving timber fretwork and timberwork simulating shingling).

This place/object may be included in the Victorian Heritage Register pursuant to the Heritage Act 2017. Check the Victorian Heritage Database, selecting 'Heritage Victoria' as the place source.
