**Statement of Significance** 

Last updated on - December 8, 2021

## What is significant?

This Werribee Blue Box grows on the northern bank of the Werribee River in Hopetoun Park, along a green corridor to the south of residential housing. This area is part of the traditional lands of the Wurundjeri people.

It is a two-trunked specimen with an unusual branch structure. There are a number of Werribee Blue Boxes along this section of the catchment, with at least four considered to be of Regional significance (T12431, T12432, T12433, T12442). There is also stand of State-significant Werribee Blue Boxes on the opposite side of the river to this tree (T12434).

## How is it significant?

This Werribee Blue Box is significant for scientific and aesthetic reasons at the Regional level.

### Why is it significant?

This tree is scientifically significant for outstanding age and rarity, and as an important source of seed.

The Werribee Blue Box was first identified as a morphologically distinct subspecies of *Eucalyptus baueriana* in 2011, and is classified as endangered in Victoria. Its distribution is restricted to the Werribee River catchment around Bacchus Marsh and downstream, growing close to watercourses and drainage lines in alluvial soils. The Werribee Blue Box population is estimated to be only a few thousand, most of which occur in the northern part of the distribution along the Coidamai and Djerriwahrr Creeks, which flow through Lake Merrimu Reservoir Reserve and Long Forest Flora Reserve.

This specimen is aesthetically significant for its unusual growth form, with twisted branches sprawling low to the ground and a bifurcated trunk, which is hollowed out from burning.

#### **Tree Measurements:**

Condition: Good Tree Type: Individual Circumference: 5.87m Height: 13.7m Canopy spread: 15m Height method: Instrument Circumference method: Tape Measure Date of measurement: 25/05/2010 Age of tree: approximately 200+ years

Other Names Werribee Blue Box,

Hermes Number 208332
