## Statement of Significance

Last updated on - October 16, 2023

**What is significant?**

A single Monterey Pine growing in Werribee Park.

**How is it significant?**

This tree is significant for scientific, landscape and historic reasons at the Regional level.

**Why is it significant?**

This Monterey Pine is scientifically significant for its large size in the western region of Melbourne taking into consideration the climate and conditions. It is also a good example of the species as it doesn't have thinning or dieback at the top of the canopy which is unusual. It is significant for its contribution to the historic landscape of Werribee Park as an original Chirnside planting from the 1870's. Many of the pines in the Werribee vicinity have died or been cleared making this an even rarer specimen.

Measurements: 08/12/2022

Spread (m): NS 21.2, EW 20.9

Girth (m): 4.45

Height (m): 29.7

Estimated age (yrs): 145

Condition: Good

Access: Restricted

Classified: 28/08/2023

Other Names      Monterey Pine,

Hermes Number    210471
