HISTORIC PLACES DOCUMENT SHEET - GRC SHEET NO 13

STATEMENT OF SIGNIFICANCE

The Fyansford Bridge, erected in 1899 and opened for traffic in February 1900, is the first bridge in Victoria completed using the new reinforced concrete technique developed in Europe and known as the 'Monier' principle. Sydney engineers Gumnow and Carter introduced the system to Australia and leading Victorian engineers John Monash and JTN Anderson pioneered this work in Victoria. The Fyansford Bridge is of paramount importance to this history of technology in Australia with finely defined proportions over the three spans of arches contributing to its notable aesthetic qualities.
