
FAIRLEY'S CREEK MINE & BATTERY SITES

Location

OFF BUCKLAND RIVER ROAD BUCKLAND, ALPINE SHIRE

Municipality

ALPINE SHIRE

Level of significance

Heritage Inventory Site

Heritage Inventory (HI) Number

H8224-0069

Heritage Listing

Victorian Heritage Inventory

Statement of Significance

Last updated on -

Sites associated with the Fairleys Creek workings located along the lower 1.5km section of Fairleys Creek before its junction with Buckland River.

Interpretation of Site	Quartz goldmining site. The early battery site is difficult to interpret as the later incline tramway has been built over its centre. The most prominent features remaining are believed to relate to the mine's development by the Fairleys Creek GMCo. They include the later battery site, tramways, water races and tunnels.
Other Names	Fairleys Creek Early Battery Site,
Hermes Number	23021

History

Mr Frank McGuire discovered quartz reef in September 1885. Quartz prospecting claim registered by Melbourne & Buckland United (1887). Mid 1888 Buffalo Gold Prospecting Co took over. Nov 1888 Fairley's Creek GMCo formed and erected battery. Crushing equipment placed on the site in April 1897 by Fairley's Creek GMCo, a London based company. They developed the reef extensively. A new 30-head battery began operation by June 1898. Two miners were killed December 1898. It appears mining operations ceased about 1901.

This place/object may be included in the Victorian Heritage Register pursuant to the Heritage Act 2017. Check the Victorian Heritage Database, selecting 'Heritage Victoria' as the place source.
