National Trust

Statement of Significance

Last updated on - July 30, 2004

Contribution to the landscape
Outstanding size

This Flowering Gum (*Corymbia ficifolia*) is a dominant feature of the streetscape and although part of the canopy on the north-west side has been removed to accommodate powerlines, the tree still maintains a reasonably full crown. *Corymbia ficifolia* is native to a very restricted, subcoastal distribution south-east of Perth and is one of the most widely cultivated of all eucalypts both in Australia and overseas .

Corymbia ficifolia is one of around 80 eucalypts which were transferred in 1995 from the genus *Eucalyptus* to the newly created genus *Corymbia*. The species was formerly known as *Eucalyptus ficifolia*.

Measurements: 04/06/1997

Spread (m): 19
