National Trust

Statement of Significance

Last updated on - June 8, 2004

Horticultural value
Contribution to landscape of historic garden.
Rare or localised.
Outstanding size
Outstanding example of species.

A tree of State significance. Very dense canopy with almost perfect symmetry and a prominent feature in the landscape. *Ficus platypoda*, is also known as the desert or rockfig and is endemic to central and northern Australia and Indonesia. The fruit can be eaten when soft and ripe. Unfortunately the tree has lost small branches within the crown due to excessive shading.

2006. Tree significantly pruned.

Measurements: 02/1986
Spread (m): 20
Girth (m): 6
Height (m): 24.6
Estimated Age (yrs): 100
Condition: Good

Measurements: 26/01/2004
