National Trust

Statement of Significance

Last updated on - June 8, 2004

Contribution to the landscape
Rare and localised

This species is a native of Southern Mexico and south to Venezuela and Colombia. It was very popular during the late 1800s for planting due to its large juvenile leaves. The only known examples in cultivation in Victoria occur at Geelong (1), Portland (2), Koroit (1) and Royal Botanic Gardens (2).
2010: Removed
