National Trust

Statement of Significance

Last updated on - July 16, 2004

Contribution to landscape of historic garden
Outstanding size

This native conifer from Queensland became very popular in the late 1880s because of its large size, dark green foliage and architectural habit. The species was widely grown in parks, botanic and private gardens around Victoria. This tree dominates the landscape and is by far the best example of the three in the gardens Located near the Queen Street entrance on the western side.
