# BET BET REEF BATTERY

---

## Location

MARYBOROUGH-DUNOLLY ROAD BET BET, CENTRAL GOLDFIELDS SHIRE

## Municipality

CENTRAL GOLDFIELDS SHIRE

## Level of significance

Heritage Inventory Site

## Heritage Inventory (HI) Number

H7624-0102

## Heritage Overlay Numbers

HO41

## Heritage Listing

Victorian Heritage Inventory

---

## Statement of Significance

Last updated on - July 4, 2005

The Bet Bet Reef Gold Puddling Site is an unusual example of a puddling machine. Instead of the usual timber slats, the puddling trench is retained by corrugated iron and stone, and has a concrete floor. The puddling machine most probably operated in the twentieth century. The puddling machine is an excellent and late example of the puddling technology developed in Victoria from 1854 in response to the need to process enormous amounts of clay soil which needed to be broken up to get at the gold. Horses were used to drag harrows around a circular ditch in which the soil and water were mixed.

The Bet Bet Reef Gold Puddling Site is of historical, archaeological and scientific importance to the State of Victoria.

The Bet Bet Reef Gold Puddling Site is historically and scientifically important as a characteristic and well preserved example of a site associated with the earliest forms of gold mining which, from 1851, played a pivotal role in the development of Victoria. Puddling machine technology is particularly important in the history of Victorian gold mining as the only technology or method developed entirely on Victorian goldfields.

The Bet Bet Reef Gold Puddling Site is archaeologically important for its potential to yield artefacts which will be able to provide significant information about the cultural history of gold mining and the gold seekers themselves.
